Waseeq Ahmed Ansari

Karachi, Pakistan | +92-312-8757721 | ansariwaseeq5@gmail.com | linkedin.com/in/waseeq-ansari08

Summary

Full-stack Engineer (React, Next.js, TypeScript, Node.js) with a track record of owning products end-to-end – backend services, APIs, databases, and the interface on top – across four teams in three years. Comfortable turning ambiguous requirements into shipped systems without close supervision, with hands-on cloud infrastructure experience (AWS, Docker, GitHub Actions CI/CD) and a strong production-debugging discipline (100% statement coverage on owned modules). Also works in Python for data/ML-focused work, and picks up new tools and domains quickly.

Skills

Full-Stack: React.js, Next.js, Vite, TypeScript, JavaScript, Node.js, NestJS, Express.js
APIs & Data: REST, gRPC, PostgreSQL, Prisma, MongoDB, MySQL, Redis, Supabase
Cloud & Infrastructure: AWS (Lambda, S3, SQS, SNS, EC2, Secrets Manager), Docker Compose, GitHub Actions (CI/CD), LocalStack
AI & Dev Tools: Cursor, GitHub Copilot, OpenAI API, Gemini API
Other Languages: Python (data/ML projects), SQL, C++
Other Tools: Git, Nx, BullMQ, PM2, Jira, Sentry, Jest

Work Experience

Botmer International *Jan 2026 – Present*
Backend Engineer *Karachi, Pakistan*

- Prevented double-booking incidents on the Senvers marketplace by designing atomic service-slot booking with overlap conflict checks, timezone validation, and transactional Prisma writes under concurrent request load.
- Delivered reliable real-time booking notifications across in-app, push, and email channels by architecting an event-driven SQS/outbox pattern with idempotent delivery for provider-facing `BOOKING_CREATED` events.
- Enabled service seeker/provider matching for end users by building match overview/detail APIs with filtering, sorting, ownership checks, and lifecycle status updates, working directly with product owners to translate marketplace requirements into API design.
- Expanded platform functionality across profile and jobs domains by shipping skills/trust summaries, education and experience attachments, feed enrichment (benefits and match percentage), and SQS-based file processing, adding analytics hooks used for stakeholder reporting.
- Increased backend reliability by achieving 100% statement coverage on owned job-service/BFF modules, integrating automated tests into Docker Compose, LocalStack, and GitHub Actions CI pipelines within an Agile delivery workflow.
- Delivered AI-powered EdTech features – syllabus parsing, vocabulary workshops, and assessment cooldown logic – using OpenAI/Gemini, Supabase, Redis, and S3, collaborating directly with the product team on requirements.

Sleekhive Technologies *Oct 2025 – Dec 2025*
Backend Engineer *Karachi, Pakistan*

- Built a SaaS workspace backend for website crawling and AI agent training, including a customer-facing embeddable chat widget with AI responses and live-agent takeover, working directly with the product team on client-specific requirements.
- Designed asynchronous processing workflows using Redis and BullMQ for website crawling, content ingestion, and AI-agent training tasks, moving long-running workloads out of request cycles to keep APIs responsive.
- Developed REST APIs for managing crawled websites, training data, agent configurations, and customer workspaces, translating product requirements into modular backend services.
- Implemented backend integrations for AI-agent workflows, connecting crawling, training, and conversational services through modular Node.js APIs and background jobs to support the end-to-end customer workflow.
- Improved messaging reliability by integrating WhatsApp (Baileys) with Redis/BullMQ queues, running Node.js services on AWS EC2 with PM2 to maintain production uptime.

SOC Solutions *Sep 2023 – Jul 2025*
Software Developer *Karachi, Pakistan*

- Scaled Web3 event platform APIs (Node.js, Express, MongoDB) to reliably serve 17,000+ users, building booking, personalized feed, and merchant/admin portal features under real production load.
- Integrated fiat and crypto payment providers including Stripe, Apple Pay, Ethereum, and Solana, using AWS Secrets Manager for secure credential management.
- Implemented asynchronous payment and platform workflows using Lambda, SQS, SNS, Redis, and S3 to reduce coupling between request handling and background processing.
- Built and maintained REST APIs and backend services across event, booking, payment, and administrative workflows, debugging production issues across Node.js, Express, MongoDB, and AWS services.
- Reduced payment processing time by approximately 20% by integrating Stripe and PayPal into e-commerce backend APIs built with Node.js, Express, and MongoDB.
- Improved session-handling performance and reduced database load on the same platform by introducing Redis caching for session state.

Education

National University of Computer and Emerging Sciences (FAST-NUCES) *Aug 2019 – Dec 2023*
B.Sc. in Computer Science *Karachi, Pakistan*

Sir Adamjee Institute of Management Sciences *2017 – 2019*
Higher Secondary Certificate (F.Sc.), Grade A *Karachi, Pakistan*
